

Chapter 6, Problem 2: Spanish NPs II

- B. Since we have no evidence regarding the feature COUNT in Spanish, it has not been included in this tree.

- C. The lexical entry for *pequeños* identifies the ARG value of the RELN ‘small’ with that of the NOM in its MOD value. The Head-Modifier Rule, which combines *pingüinos* and *pequeños* into a phrase, identifies the MOD value of the modifier with the entire head. Hence, the INDEX value of *pingüinos* must be identical to the INDEX value in the MOD value of *pequeños*. And that, as we noted, is lexically stipulated to be identical to the argument of the predication introduced by *pequeños*.
